And I'm afraid that nobody but you can maintain matrix..
JP -> Marc-Andre Lafortune Matrix class
-> I'm afraid for losing maintainers.

Nobody but you haven't maintained EigenvalueDecomposition class, and it's little complicated.
JP -> Marc-Andre Lafortune EigenvalueDecomposition
-> Because only Marc-Andre commits to EigenvalueDecomposition class, which is little complex.

But I think Whether I use github or redmine, It's not problem. (If it's github's problem, We should solve that right now. )
JP
-> Github redmine Github

-> The problem is it has few maintainers. I don't think this is a problem of tools (e.g. GitHub, Redmine); If the problem's origin is a tool, I think it should be fixed ASAP.

And here's my reply for the above comment:

IMO we're welcome to your contribution. Patches are welcomed and you can be a committer if it's needed, and you wants to. But please remember that almost of us are volunteer. I think you already know as you did, write a code, not only criticizing.

volunteer

And about delayed review on GitHub -- because we use bugs.ruby-lang.org (Redmine) for primary, please file a ticket if you want to be reviewed. See https://bugs.ruby-lang.org/projects/ruby/wiki/HowToContribute

(but I agree to this documentation is little weak to say about this...)

I agree with you. But I think only Mr. Marc-Andre Lafortune can review my PR, and this is why it take time to review.

OK, I will throw the patches to redmine in silence. Thank you for your comment.

@ Hiroshi SHIBATA
