<b>Description</b>		
Hi		
There's the issue:		
<pre>"String".to_i =&gt; 0</pre>		
This must be NIL or at least error, but no 0, because the string is not a number, also:		
<pre>"10String".to_i =&gt; 10</pre>		
Is not 10, because "10String" is not a number, maybe is necessary a new method to get a number from any string, because to_i is to convert into a Integer and that should return an error.		
Greetings everyone

- Description updated

- Status changed from Open to Rejected

You can use Integer("String") instead.
