Bug [#1136](#): "ri Kernel#require" is broken
<http://redmine.ruby-lang.org/issues/show/1136>

Author: Jeremy Henty
Status: Open, Priority: Normal
ruby -v: ruby 1.8.7 (2008-08-11 patchlevel 72) [i686-linux]

\$ ri Kernel#require
More than one method matched your request. You can refine your search by asking for information on one of:

Kernel#require, Kernel#rescue_require, Kernel#require

Now what do I do to see the Kernel#require documentation?
it would be nice if ri would use a ambiguity resolution like gem:

\$ gem uninstall rails
Select gem to uninstall:

1. rails-1.2.6
2. rails-2.1.2
3. rails-2.2.2
4. All versions > 4

like

\$ ri Kernel#require

More than one method matched your request. Which one did you mean?

1. Kernel#require
2. Kernel#rescue_require
3. Kernel#require > 1

- Project changed from Ruby to Ruby master

- Assignee set to drbrain (Eric Hodel)

#3 - 07/09/2011 08:03 AM - drbrain (Eric Hodel)

- *Category set to lib*
- *Status changed from Open to Closed*
- *Target version set to 1.9.3*

I cannot reproduce:

```
$ gem19 install rails -i ~/tmp/gems
```

```
...
```

```
24 gems installed
```

```
$ GEM_HOME=~/tmp/gems ri19 Kernel#require
```

```
Kernel#require
```

```
(from ruby core)
```

```
...
```

```
$ GEM_HOME=~/tmp/gems ri19 --version
```

```
ri19 3.8
```

```
$ ruby19 --version
```

```
ruby 1.9.3dev (2011-07-07 trunk 32428) [x86_64-darwin10.8.0]
```
