

Ruby master - Feature #11634

[PATCH] variable.c (rb_global_tbl): convert to id_table

10/29/2015 08:11 PM - normalperson (Eric Wong)

Status:	Open	
Priority:	Normal	
Assignee:		
Target version:		
Description		
variable.c (rb_global_tbl): convert to id_table		
<p>Mainly this is to reduce casting a tiny amount; and probably nothing depends on the order of globals. Likely no measurable memory usage improvement as globals are not common, but maybe some weird code out there benefits.</p> <p>I'm also working on patches to convert ivar-related tables to id_table; but figured I'd get this out of the way, first.</p> <p>There's also: https://bugs.ruby-lang.org/issues/11614 ("[RFC] use id_table for constant tables") but that is actually most likely to cause breakage in class name resolution.</p>
