

Ruby trunk - Feature #11987

daemons can't show the backtrace of rb_bug

01/13/2016 10:38 AM - naruse (Yui NARUSE)

Status: Open	
Priority: Normal	
Assignee:	
Target version:	
Description Ruby shows backtrace and other information into stderr on rb_bug. But daemon process redirects stderr into /dev/null. How do I get the log? NOTE: if I can reproduce this, I can use strace to get it. But issues are not always reproducible.	

History

#1 - 01/13/2016 10:58 AM - normalperson (Eric Wong)

I always recommend pointing stderr to a regular file using
IO#reopen after daemonization. Perhaps kwargs may be added
to Process.daemon to encourage this usage?

```
Process.daemon err: '/path/to/stderr.log', out: '/path/to/stdout.log'
```
