

Ruby master - Feature #12971

(Refactoring) Remove `defined?` checks from observer.rb

11/22/2016 05:30 PM - itsNikolay (Nikolay Ponomarev)

Status:	Open
Priority:	Normal
Assignee:	
Target version:	
Description	
Remove defined? checks from observer.rb	
<ul style="list-style-type: none">• Contains less code• Easier to understand Observable logic• No performance downgrade

You have to define the instance method, not setting instance variables on Observable module.
For example:

```
module Initializer
  def initialize(*)
    @observer_peers ||= {}
    @observer_state ||= false
    super
  end
end
```

```
def self.included(mod)
  mod.prepend(Initializer)
  super
end
```
