

Ruby master - Bug #15582

default/bundler-1.17.2.gemspec has no file list

02/01/2019 12:39 PM - mame (Yusuke Endoh)

Status: Closed	
Priority: Normal	
Assignee: hsbt (Hiroshi SHIBATA)	
Target version:	
ruby -v: ruby 2.6.1p33 (2019-01-30 revision 66950) [x86_64-linux]	Backport: 2.4: DONTNEED, 2.5: DONTNEED, 2.6: DONE
Description Ruby 2.6.1's <code>prefix/lib/ruby/gems/2.6.0/specifications/default/bundler-1.17.2.gemspec</code> seems wrong. <pre>s.files = ["bundler.rb".freeze, "exe/bundle".freeze, "exe/bundler".freeze]</pre> It should have "bundler/setup.rb", "bundler/version.rb", etc. This causes a trouble depending upon the order of require when a different version of bundler is installed: \$ gem list bundler *** LOCAL GEMS *** bundler (1.17.3, default: 1.17.2) \$ ruby -e 'require "bundler/version"; require "bundler"; p Bundler::VERSION' "1.17.2" \$ ruby -e 'require "bundler"; require "bundler/version"; p Bundler::VERSION' "1.17.3"

Revision 7c9771be - 02/01/2019 01:41 PM - hsbt (Hiroshi SHIBATA)

Fixed gemspec location of bundler.

FileCollector of `rbinstall.rb` requires location of gemspec under the sub-direcotry with the same name as default gems.

I forgot to fix it with r66867.

History

#1 - 02/01/2019 01:21 PM - hsbt (Hiroshi SHIBATA)

- File 15582-bundler-gemspec.patch added

Thanks, I forgot to apply to move gemspec location for FileCollector of rbininstall.rb related r66913.

I attached the patch for this issue.

#2 - 02/01/2019 01:23 PM - hsbt (Hiroshi SHIBATA)

If you use rbenv and ruby-build, You can build 2.6.1 with this patch like this.

```
curl -sSL https://bugs.ruby-lang.org/attachments/download/7631/15582-bundler-gemspec.patch | rbenv install --p
atch 2.6.1 -f
```

#3 - 02/01/2019 01:42 PM - hsbt (Hiroshi SHIBATA)

- Status changed from Assigned to Closed

Applied in changeset [trunk|r66984](#).

Fixed gemspec location of bundler.

FileCollector of rbininstall.rb requires location of gemspec under
the sub-direcotry with the same name as default gems.

I forgot to fix it with r66867.

#4 - 02/04/2019 11:26 PM - mame (Yusuke Endoh)

- Has duplicate Bug #15586: Requiring `bundler/setup` gets wrong version added

#5 - 02/05/2019 12:18 PM - hsbt (Hiroshi SHIBATA)

- Backport changed from 2.4: UNKNOWN, 2.5: UNKNOWN, 2.6: REQUIRED to 2.4: DONTNEED, 2.5: DONTNEED, 2.6: REQUIRED

#6 - 02/12/2019 02:20 AM - mame (Yusuke Endoh)

FYI: I've heard that we can work around this issue by gem update --system.

#7 - 02/13/2019 04:09 PM - deivid (David Rodríguez)

Yes, since rubygems 2.6.1 ships with rubygems 3.0.1, running gem update --system will update to the latest version (3.0.2) and force reinstallation of the default bundler gem.

However, I have noticed that other default gems suffer from this issue, for example the etc gem. In that case, a workaround is to reinstall the same version of the default gem, for example, gem install etc:1.0.1 --default.

#8 - 03/06/2019 08:53 AM - naruse (Yui NARUSE)

- Backport changed from 2.4: DONTNEED, 2.5: DONTNEED, 2.6: REQUIRED to 2.4: DONTNEED, 2.5: DONTNEED, 2.6: DONE

ruby_2_6 r67180 merged revision(s) 66984.

#9 - 03/08/2019 11:41 AM - hsbt (Hiroshi SHIBATA)

- Has duplicate Bug #15622: Default version of Bundler incorrectly invoked when using binstubs added

#10 - 03/14/2019 05:21 PM - deivid (David Rodriguez)

Hi [hsbt \(Hiroshi SHIBATA\)](#)!

I assumed this fix would also fix the incorrect file list for the etc gem's gemspec but I didn't try it to make sure and it looks like it didn't fix it actually. On the default ruby 2.6.2 release, the file list is ["etc.so", "ext/etc/extconf.rb"]. If I force reinstallation as a default gem, it becomes [".gitignore".freeze, ".travis.yml".freeze, "Gemfile".freeze, "LICENSE.txt".freeze, "README.md".freeze, "Rakefile".freeze, "bin/console".freeze, "bin/setup".freeze, "etc.gemspec".freeze, "ext/etc/etc.c".freeze, "ext/etc/extconf.rb".freeze, "ext/etc/mkconstants.rb".freeze, "test/etc/test_etc.rb".freeze].

This causes some spec failures on bundler's test suite.

Let me know if you want me to open a new ticket!

Thanks!
