Ruby trunk - Feature #2454

OpenSSL has no maintainer

12/08/2009 12:54 AM - naruse (Yui NARUSE)

Status:	Rejected
Priority:	Normal
Assignee:	
Target version:	2.0.0

Description

=begin
OpenSSL is famous security library and Ruby has a wrapper for it.
But it has no maintainer now.
We, aren't familiar with this security related library, don't want maintain this.
This situation prevent merging path for OpenSSL 1.0 and other requests.

So anyone can maintain ext/openssl or review patches for ext/openssl?
=end

History

=begin
I am rather interested in Cryptography and have used this library before and found
the documentation rather lacking.

I would be interested in picking this project up though I am having some issues.

I've tried checking out the code through here:
http://savannah.nongnu.org/projects/rubypki/

I keep getting errors when I try to checkout using 'git cvsimport' or by using cvs.

Anyone having similar problems and or suggestions?
=end

#2 - 12/08/2009 03:23 AM - dbussink (Dirkjan Bussink)

=begin
Well, the code for the OpenSSL extension is inside the Ruby repository, so you'll have to look for the code there. Take a look at:

http://www.ruby-lang.org/en/community/ruby-core/#following-ruby
=end

#3 - 12/08/2009 03:36 AM - ephoenix (Evan Phoenix)

=begin
I've been working on getting the OpenSSL extension running on Rubinius. I'm happy to finish doing some cleanup and submitting the changes back.
Since we'll have our own changes, I'll be doing maintenance on it, and i'm happy to to push that maintenance into the normal OpenSSL extension.
=end

#4 - 12/08/2009 02:23 PM - naruse (Yui NARUSE)

- Status changed from Open to Assigned

- Assignee set to matz (Yukihiro Matsumoto)

In the long term, Chris' point is important.
Current ext/openssl is too low layer, and net/http is also low.
We should introduce another wrapper layer in the future.

Interesting suggestion.
How about this, matz?

|
|Interesting suggestion.
|How about this, matz?

If Evan wants committer privilege to check in his update, I'd love to
grant him a right. I am more than happy if he's willing to maintain
openssl extension for MRI as well, but I don't think he has offered
so.

                            matz.

Hi,

In message "Re: [ruby-core:27105] Re: [Feature #2454](#) OpenSSL has no maintainer"
on Wed, 9 Dec 2009 07:09:08 +0900, Evan Phoenix [evan@fallingsnow.net](#) writes:

|Sorry about the confusion. I'm happy to take over maintenance of the extension for MRI as well. This will allow me to have MRI and rubinius use the
same extension.

Thank you! Please send your GPG signed ssh2 public key to
[cvs-admin@rubu-lang.org](#) with sought account name. We will grant you
the privilege.

                            matz.

They generously allowed me to use Mail.app encryption. I know several of them are sporting macs now. :)

We need some signed message.
Following articles describes how to use GPG on Mail App on Mac OS X including Snow Leopard, but in Japanese.
Can anyone who has Snow Leopard teach him?

The ssh key and the GPG key are two different things.

The ssh public key lives in ~/.ssh/.id_dsa.pub.

Here's a GPG tutorial: http://aplawrence.com/Basics/gpg.html
For email encryption/signing, I've found Thunderbird + Enigmail to be an excellent combination.
