

Ruby master - Bug #254

PStore in Ruby 1.9.0.2

07/10/2008 02:49 PM - Anonymous

Status: Closed	
Priority: Normal	
Assignee:	
Target version:	
ruby -v:	Backport:
Description =begin Hello, It looks like PStore.transaction (since svn revision 15948) no longer returns the value of the yielded block, due to the 'value' variable being moved into the ensure block. Lin =end

[ruby/openssl] ssl: temporarily remove SSLContext#add_certificate_chain_file

Let's revert the changes for now, as it cannot be included in the 2.2.0 release.

My comment on #257:

A blocker is OpenSSL::SSL::SSLContext#add_certificate_chain_file. It has a pending change and I don't want to include it in an incomplete state.

The initial implementation in commit 46e4bdba40c5 was not really useful. The issue is described in #305. #309 extended it to take the corresponding private key together. However, the new implementation was incompatible on Windows and was reverted by #320 to the initial one.

(The prerequisite to implement it in an alternative way is #288, and it's still cooking.

This effectively reverts the following commits:

- dacd08937ccd ("ssl: suppress test failure with SSLContext#add_certificate_chain_file", 2020-03-09)
- 46e4bdba40c5 ("Add support for SSL_CTX_use_certificate_chain_file. Fixes #254.", 2019-06-13)
