

Ruby master - Feature #3906

Initializing and loading Rails environment takes really long on Windows XP

Target version:	1.9.3	
Description =begin Initializing and loading Rails environment takes really long on Windows XP. I experience anywhere from 45secs to 2mins. After consulting a few people, I was told that it's a Ruby I/O issue on Windows. There's even a plugin to help mitigate this very long load time @ http://github.com/rdp/faster_require . Please see if there's anything that can be done to resolve this issue. Thanks! =end

History

#1 - 10/21/2010 04:15 PM - naruse (Yui NARUSE)

- Target version changed from 1.9.2 to 1.9.3

=begin

This is considered RubyGems' problem and plan to fix in 1.9.3 because it needs a large change.
