IMAPTest#test_imaps_verify_none hangs up and can not stop with SIGINT.
I guess problem exists in openssl_shutdown, and running test does not stop with reverting r30451 .

% ruby-trunk test/net/imap/test_imap.rb -v -n test_imaps_verify_none
Run options: -v -n test_imaps_verify_none

Running tests:

IMAPTest#test_imaps_verify_none =

Thanks, I'm working on it. Unfortunately, the imap tests just segv for me. Even if I revert r30451, they segv:

This bug was introduced by r30451, and fixed by reverting this at r30488.
And the original issue should be medicated at r32219.
