

Ruby master - Bug #4731

ruby -S irb fails with mingw/msys vanilla builds

05/19/2011 01:29 AM - rogerdpack (Roger Pack)

Status: Rejected	
Priority: Normal	
Assignee: nobu (Nobuyoshi Nakada)	
Target version:	
ruby -v: -	Backport:
Description	
as reported originally with http://blade.nagaokaut.ac.jp/cgi-bin/scat.rb/ruby/ruby-core/36285 basically mingw builds fail with \$ ruby -S irb and always have, at least for the 1.9 branches.	
\$ ruby -S irb ruby: No such file or directory -- irb (LoadError)	

History

#1 - 06/11/2011 04:58 PM - ko1 (Koichi Sasada)

- Status changed from Open to Assigned
- Assignee set to nobu (Nobuyoshi Nakada)

#2 - 07/15/2011 11:10 AM - nobu (Nobuyoshi Nakada)

- Status changed from Assigned to Feedback

I can't reproduce it.
Is irb only a batch file, or an exe file?

#3 - 07/15/2011 09:28 PM - luislavena (Luis Lavena)

Is irb only a batch file, or an exe file?

After make install the end result in the indicated prefix is a series of batch files like: irb.bat which contains a mix of windows commands and the Ruby script in it, which is then fired using ruby -x

On RubyInstaller we replaced that with plain stubs and the original scripts from Ruby's source code, see here:

<https://github.com/oneclick/rubyinstaller/blob/master/recipes/interpreter/ruby19.rake#L146-149>
<https://github.com/oneclick/rubyinstaller/blob/master/recipes/interpreter/ruby19.rake#L156-161>
<https://github.com/oneclick/rubyinstaller/blob/master/recipes/interpreter/ruby19.rake#L182-191>

This workaround was implemented so ruby -S irb works.

#4 - 07/16/2011 07:53 PM - nobu (Nobuyoshi Nakada)

- ruby -v changed from ruby 1.9.3dev (2011-05-18 trunk 31614) [i386-mingw32] to -

Hi,

I see. There is only irb.bat, not irb sans the suffix. In that sense, it's natural to fail, but maybe unexpected behavior. Now I'm thinking to make -S option search with .bat (and .cmd too) suffix if it is not found. How do you feel

about this?

```

Thank you Nakada-san, I see a few drawbacks with this approach:

- For a missing script (e.g. foo), system will attempt to find two extra "foo.bat" and "foo.cmd" in all portions of PATH, which will be expensive.
- It will introduce a platform-specific discrepancy that other implementations will either need to implement or indicate that are not compatible.

I would like to understand why original script is merged with the batchfile stub in tools/rbinstall.rb

Perhaps we can remove that?

The only reason I see with this is PowerShell, which finds the extensionless script prior the .bat one and attempts to execute it (dunno why, but that is what it tries).

For users with PowerShell I've always recommend them use "ruby -S script" instead.

Thank you for your time.

Perhaps we can remove that?

Removing the stub, or splitting to a batch file and a script file?

The only reason I see with this is PowerShell, which finds the extensionless script prior the .bat one and attempts to execute it (dunno why, but that is what it tries).

The reason is just that one file is handier than two files.
I know nothing about PowerShell.

Removing the stub, or splitting to a batch file and a script
file?

Splitting to back and script file.

The only reason I see with this is PowerShell, which finds the
extensionless script prior the .bat one and attempts to execute it
(dunno why, but that is what it tries).

The reason is just that one file is handier than two files.

What particular thing are you doing with the files? If I move I move
the entire directory.

Thank you.

I proposed an alternate rbinstall.rb method in [#6769](#) that will correct this issue.

However, workload has been high and code in rbinstall.rb is not very clear.

#10 - 10/30/2015 12:38 PM - luislavena (Luis Lavena)

- Assignee changed from luislavena (Luis Lavena) to nobu (Nobuyoshi Nakada)

#11 - 08/29/2017 08:43 AM - hsbt (Hiroshi SHIBATA)

- Status changed from Assigned to Rejected

I couldn't reproduce this with RubyInstaller 2.4.1-2.
