

Ruby trunk - Bug #5357

Indentation of nested operators should nest

09/23/2011 07:02 PM - now (Nikolai Weibull)

Status: Assigned	
Priority: Normal	
Assignee: nobu (Nobuyoshi Nakada)	
Target version:	
ruby -v: trunk	Backport: 2.3: UNKNOWN, 2.4: UNKNOWN, 2.5: UNKNOWN
Description Hi! Currently, return if hash. values_at(:a, :b, :c). reject{ e e.nil? or e.empty? }. empty? is indented as return if hash. values_at(:a, :b, :c). reject{ e e.nil? or e.empty? }. empty? I would prefer it to be indented as in the first example.

Your first example seems inconsistent, why are the last 3 lines indented at the same column?
It would be:

```
return if
hash.
values_at(:a, :b, :c).
reject{ |e| e.nil? or e.empty? }.
empty?
```

But it doesn't look nice to me.

```
=end
```

Your first example seems inconsistent, why are the last 3 lines indented at the same column?
It would be:

```
return if
  hash.
  values_at(:a, :b, :c).
  reject{ |e| e.nil? or e.empty? }.
  empty?
```

But it doesn't look nice to me.

Indenting the last 3 lines highlights that the method chain is hanging off hash. I do this myself.
