#3 - 11/10/2012 05:23 PM - duerst (Martin Dürst)

- Target version changed from 2.0.0 to 2.6

I have thought about this a bit. Yui's patch to string treats this as a problem separat from transcoding. I think it is preferable to use the transcoding logic to implement this. The advantage is that exactly the same options and fallbacks can be used, and if we add a new option or fallback to transcode, it will be usable, too.

Some more notes: The checks for converting from one encoding to the same encoding are in str_transcode0. Anywhere else? We need some data to drive the conversion, but this should be easy to generate, and will be the same for many 8-bit encodings.

It will be easy to catch invalid byte sequences, but I'm not sure it's worth to check unassigned codepoints, at least not in Unicode.

I have changed the target version from 2.0.0 to next minor, because I don't think this will be ready for 2.0.0. But please change back if somebody can do it faster.

#4 - 01/09/2013 05:58 PM - knu (Akinori MUSHA)

=begin
(('+1')) for the functionality.

What we currently have (Encoding::Converter) is not enough to solve this problem because 1) it is mandatory to pick a different encoding to convert to for nothing, and even if you have decided to pick one 2) #primitive_errinfo does not give you offset information that is necessary to locate where the found invalid bytes are.

In addition to this proposal, I'd like String#encode to accept a proc instead of a fixed string as a :replace option to get a callback for each invalid byte so you can dynamically compose a replace string for the given invalid byte. Perl's encode() and decode() have this feature and it's very handy to investigate and visualize how a string is garbled. (e.g. (({replace: ->(byte) { "\e[7m<%02X>\e[m" % byte }})))

I don't have a particular opinion about the API, but having self-transcoders perform validation as duerst (Martin Dürst) implies sounds great to me if it could be properly implemented.

My tentative solution that is known to be very slow is here: ((URL:https://gist.github.com/4491446))
=end

#5 - 04/09/2013 04:38 AM - naruse (Yui NARUSE)

duerst (Martin Dürst) wrote:

The advantage is that exactly the same options and fallbacks can be used, and if we add a new option or fallback to transcode, it will be usable, too.

This method doesn't need same options and fallbacks.
It need only invalid related, doesn't need undef related.
Moreover transcoder is usable only if Ruby has related transcoder of the target encoding.
But Ruby has some encodings which doesn't have transcoder for example emacs-mule.
Therefore this can't be built on transcoder.

> Some more notes: The checks for converting from one encoding to the same encoding are in str_transcode0. Anywhere else? We need some data to drive the conversion, but this should be easy to generate, and will be the same for many 8-bit encodings.

Yeah, I came to str_transcode0 and it is correct place.

The date we need is problem.
transcode doesn't have all the data though tool/transcode-tblgen.rb has some base data.
The only one which has all the data we need is enc/*.

> It will be easy to catch invalid byte sequences, but I'm not sure it's worth to check unassigned codepoints, at least not in Unicode.

If we need unassigned codepoints, we must define encodings more strictly.
Even if it is Unicode, it needs versions.
I don't think it's worth to check.

#6 - 04/09/2013 06:24 PM - naruse (Yui NARUSE)

I wrote a updated patch which include String#scrub and String#encode with extension.
String#scrub allows replacement as both argument or block.

#8 - 04/19/2013 12:31 PM - matz (Yukihiro Matsumoto)

OK, I agree with enhancement of String#encoding and String#scrub.

Matz.

#9 - 04/20/2013 05:21 AM - naruse (Yui NARUSE)

- Status changed from Assigned to Closed

- % Done changed from 0 to 100

This issue was solved with changeset r40391.
Yui, thank you for reporting this issue.
Your contribution to Ruby is greatly appreciated.
May Ruby be with you.

Add example for String#scrub

[Feature #6321] [Feature #6752] [Bug #7967]
