<http://www.ruby-doc.org/> is maintained by James Britt

If you ask nicely, he might help us out.

Psych is already under ext/.document so it should use that as reference.

Sorry, but I do not know how to open an issue there. I also have no insight into the way documentation is created and can not make any use of your last sentence.

I already did file an issue at Psych's GitHub repository and was referenced here by Aaron Patterson, and I fear I have not the time to advance this further.

I just think missing documentation makes a rather bad impression.

Thanks Eric, I wasn't sure if TPI was considered resolved.
