

Ruby master - Misc #9516

Consolidate all deprecation messages to one or more helper methods

Description	
<p>I was examining this blog entry: http://batsov.com/articles/2014/02/05/a-list-of-deprecated-stuff-in-ruby/ and I wanted to add these warning in JRuby. I thought it would be nice if I could make a higher level construct (e.g. @RubyDeprecated(use="Dir.exist?")) but then realized MRI does not consistently have the same warning string formats:</p> <p>"Dir.exists? is a deprecated name, use Dir.exist? instead" "GDBM#index is deprecated; use GDBM#key" "Zlib::GzipReader#bytes is deprecated; use #each_byte instead"</p> <p>Some helper methods could make these consistent and then I could make the higher level abstraction in JRuby as well. Since these are warnings I might still make an abstraction and let JRuby be a little inconsistent but I thought I would pass this idea along.</p>
